DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1 and 23** (as well as their corresponding dependents) are drawn to a method of automatically decomposing an image sequence, classified in class 382 (Image Analysis), subclass 173 (Image Segmentation).
 - II. **Claim 33** (as well as its corresponding dependents) is drawn to a method of automatically learning a generative model from an image sequence, classified in class 382 (Image Analysis), subclass 159 (Learning Systems, Trainable Classifiers or Pattern Recognizers).

The inventions are distinct, each from the other because of the following reason:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP 806.05 (c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination requires any type of automatic decomposition of an image sequence into a preferred number of classes of objects, the subcombination requires specifically using a generative model to automatically learn by forming a probabilistic model having variational parameters. The subcombination has separate utility such as for providing a generative model for other types of image sequence applications.

Because the inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP 808.02), restriction for examination purposes as indicated is proper.

2. In summary, the applicant has one of 2 options:

- (i) Election of **invention I** (claims 1 and 23 and their corresponding dependents); or
- (ii) Election of **invention II** (Claim 33 and its corresponding dependents).
